

ALPIN INSIGHT SOLUTIONS

A DJANGO UI FRAMEWORK

Django Insight UI

Over 60 components, WCAG 2.1 AA compliance out of the box. Accessible Django applications—without needing your own front-end team.

MINIMAL. SCALABLE. COMPUTABLE.

Version 1.1.0

05 Outlook / Roadmap

Origins and Concept

01

The Problem Every Django Project Faces

Problem

- Every project starts from scratch on the front end
- No common design standard
- Accessibility is rebuilt from scratch every time

Without Insight UI

```
<button type="button"
  class="inline-flex items-center gap-2
    rounded-md bg-orange-600 px-4 py-2
    text-sm font-medium text-white
    hover:bg-orange-700
    focus-visible:outline-2
    focus-visible:outline-offset-2
    disabled:opacity-50"
  aria-describedby="save-hint"
  aria-disabled="false">
  Save
</button>
```

What Does Insight UI Do

Solution

- Prefabricated components instead of new construction
- Centralized design system using tokens
- Accessibility is built in

With Insight UI

```
{% load insight_tags %}  
{% button label="Save" type="primary" %}
```

Core Characteristics

02

Stick with Your Stack—Django Templates, Django Tags

Why?

- Backend and Frontend in a Single Project
- Ideal for rapid prototyping and PoCs
- Easy integration, even into existing apps
- Configuration via Python
- Basically no HTML, CSS, or JavaScript
- Interactivity via HTMX — including SSE and WebSocket support

Integrated in three steps

```
# Install Package
pip install insight-ui

# Register app
INSTALLED_APPS = [..., "insight_ui"]

# Load tags into the template
{% load insight_tags %}
```

Modular—Components & Design System

Scope

- Over 60 components available
- Consistent parameter logic across the board
- Components are responsive
- Custom components can be added

Uniform Configuration

```
@dataclass
class ButtonConfig:
    label: str
    variant: Variant = Variant.PRIMARY
    size: Size = Size.MD
    disabled: bool = False

# Usage (Python)
context["btn"] = Button(ButtonConfig(label="Save"))

# Usage (Template)
{% button config=btn %}
```

Customizable—Central Design System

Token-based

- Colors, Typography, and Spacing as Tokens
- A single value affects the entire application
- Custom corporate design without having to rewrite CSS
- Components are fully customizable

Defined centrally

```
:root {  
  --insight-color-primary: #FF6A00;  
  --insight-radius-md: 0.375rem;  
  --insight-space-4: 1rem;  
  --insight-font-sans: "Inter", sans-serif;  
}
```

Accessibility—Built In from the Start, Not Added Later

Why is this so important to us?

- Equal Access to Information for Everyone
- A Legal Requirement, Not an Option
- Improved Usability for Every User

What does that mean, specifically:

- Components are WCAG 2.1 AA compliant
- Semantic HTML as the foundation
- ARIA attributes for screen reader support
- Full keyboard navigation + focus order
- Verified contrast ratios in all states

Insight UI in Action

03

A Brief Overview of the Components and Documentation

Documentation

04

Available at: <https://django-insight-ui.com>

Outlook / Roadmap

05

Outlook / Roadmap

The next 1–2 months

Stability / Feedback

Improve components, incorporate feedback, establish processes

Through the end of November

Simplify

Theme Editor in the browser—no more Tailwind Compiler

By the end of Q1 2027

Expand

Expand the component catalog to include new use cases

Through the end of October

Live Configurator

Be able to edit or configure components directly in the documentation

Through the end of 2026

Add-Ons

Publish Insight Profiles and Insight Flows as add-ons

Want to give it a try?

Run ``pip install insight-ui``

[Docs](#) · [GitHub](#) · [Contact](#) – feel free to reach out to us directly.
Questions, feedback, or a live demo? We look forward to talking with you.

MINIMAL. SCALABLE. COMPUTABLE.

Thank you very much for your attention!
